

ST. CAMILLUS HTS CENTRE

ANNUAL REPORT

JANUARY – DECEMBER 2021

OUR GOAL

To bring HIV testing and treatment to the vast majority of people living with HIV reduce their viral load to undetectable levels and meet the global target of 90: 90: 90 strategies by 2030.

OBJECTIVES

- To facilitate the generation and synthesis of information on the key populations for evidence-based programming for targeted populations.
- To increase access to comprehensive services for the targeted populations.
- To promote linkage services to the positive clients within our facility.

HIGHLIGHTS OF THE REPORT

It gives a comprehensive and detailed overview of HIV testing services in St Camillus mission hospital in a period of one year.

BACKGROUND INFORMATION

The history of HIV/AIDS began in illness, fear, and death as the world faced a new and unknown virus. However scientific advances such as the development of antiretroviral drugs have enabled people with access to treatment to live long and healthy lives with HIV.

Global prevalence among adults (the percent of people ages 15 – 49 who are infected) has leveled since 2001 and was 0.7% in 2019, there were 38 million people living with HIV in 2019 up from 30.7 million in 2010, the result of continuing new infections and people living longer with HIV. The world has made vast milestones in the control of the epidemic.

INTRODUCTION

Every year 21% of new adult HIV infections occur among young women adults aged 15 – 24. In 2017, 1.5 million Kenyans were living with HIV and in that same year, 110,000 children were living with HIV. 63% of men and 80% of women know their HIV status (KENYA HIV ESTIMATES)

Kenya's HIV prevalence is driven by sexual transmission and is generalized, meaning it affects all sections of the population including children, 'young people. HIV continues to be a major public health challenge in sub-Saharan Africa where an estimated 22 million people are living with HIV. In a population of 40 million, 1.6 million people of all ages were living with HIV in 2012, and an estimated 98, 000 of these had acquired HIV infections within the preceding year making Kenya's HIV epidemic the fourth largest worldwide. For this reason, Kenya has been regarded globally as a priority country in sub- Sahara Africa to reverse the spread of HIV in the region.

ST CAMILLUS MISSION HOSPITAL

The hospital is based along with the great Lake Victoria in the former great Nyanza province in Migori county Nyatike sub – County, it offers several services including HIV services.

STAFFING

The facility has 5 HIV testers working around the clock in offering HIV services to the patients at large.

Ongoing Community Counselling Session

CAPACITY BUILDING

This year's capacity building was done both internally and externally i.e., counselors support supervision and online updates from the technical assistance team (TA) from both the KARP offices in Kisii and the sub-county region.

CHALLENGES

- The emergence of Covid 19 posed a lot of challenges to our testing target
- Test kit shortage all over the Country hampered with the testing services

ACHIEVEMENTS

- The government has tried to manage the spread of covid 19 and thus giving us humble time to offer our services
- We attended both internal and external counselors' support supervision.

Consultants support ongoing supervision

FUTURE PLANS

- To reach the entire community with HTS and to have HIV free society
- To reach all HIV positive sexual contacts with HIV services
- Expect to get more refresher training to keep for more update

THE TABULATED STATISTICAL SUMMARY OF CLIENTS TESTED FROM JAN- DEC 2021

MONTH	MALE			FEMALE			TOTAL		
	No. tested	Total +	Total -	No tested	Total +	Total-	Total tested	Total +	% post
Jan	43	3	40	68	5	63	111	8	7.2
